RDA 24-165 hybrid – two forces, three possibilities

The new dry offset and inkjet
printing and lacquering machine
for tubes and sleeves

//polytype

A new dimension in plastic tube and sleeve decoration

- // Combining the benefits of two printing methods
- // Offset – full-area printing at top speeds, razor-sharp text, Pantone colors possible
- // Inkjet – photorealistic images, fast design changes
- // Cost-efficient for small and large batches

The RDA 24-165 hybrid is equipped with six inkjet heads and up to eight offset colour heads. Each inkjet colour is dried after application, thus ensuring optimum print image quality. The two printing methods are precisely aligned with each other, with the result that they complement one another perfectly. The production speed of the printing and lacquering machine is up to 165 tubes/min. (including inkjet) and is designed for standard tubes and sleeves.
